

IN THE CLAIMS:

Claims 1 -63. (Cancelled).

64. (Currently Amended) A supporting device comprising:

a base having a front rail and a rear rail extending between a first end and a second end and being collapsible between a transport position and a support position; and

a wheel mechanism ~~pivotably~~ connected to one of said ends and moveable and being pivotable between a rolling position and a working position, wherein said wheel mechanism extends substantially parallel to said base when in said transport position and said wheel mechanism extends substantially perpendicular to said base when in said support position; for allowing quick and easy transportation of said device

a pivot coupling said wheel mechanism and said base and allowing said wheel mechanism to pivot between said rolling position and said working position; and

a locking device coupling said wheel mechanism and said base and locking said wheel mechanism in said rolling position and releasing said wheel mechanism into said working position.

65. (Cancelled).

66. (Currently Amended) A device as set forth in claim 64 ~~[[65]]~~ wherein said pivot is further defined as a pin engaging said wheel mechanism and said base.

67. (Cancelled)

68. (Currently Amended) A device as set forth in claim 64 ~~[[67]]~~ wherein said locking device is further defined as including a locking pin between said wheel mechanism and said base.

69. (Currently Amended) A device as set forth in claim 64 ~~[[67]]~~ wherein said wheel mechanism further includes a wheel brace extending between said front rail and said rear rail and engaging said locking device.

70. (Previously Presented) A device as set forth in claim 69 wherein said wheel brace has slots for receiving said front rail and said rear rail, each of said slots being U-shaped to allow said locking device to extend therethrough and to secure said wheel mechanism to said front and rear rails.

71. (Previously Presented) A device as set forth in claim 69 wherein said wheel mechanism further includes a pair of wheels having a wheel support extending between said wheels and being connected to said wheel brace for transporting said device .

72. (Currently Amended) A device as set forth in claim 71 further including a wheel extension connecting said wheel support to said wheel brace such that as said wheel extension pivots, said wheel mechanism extends a predetermined amount below said base ~~to allow for insertion of the work piece within said clamping area.~~
